

# Breakout Rooms

February 2024

]pexip[

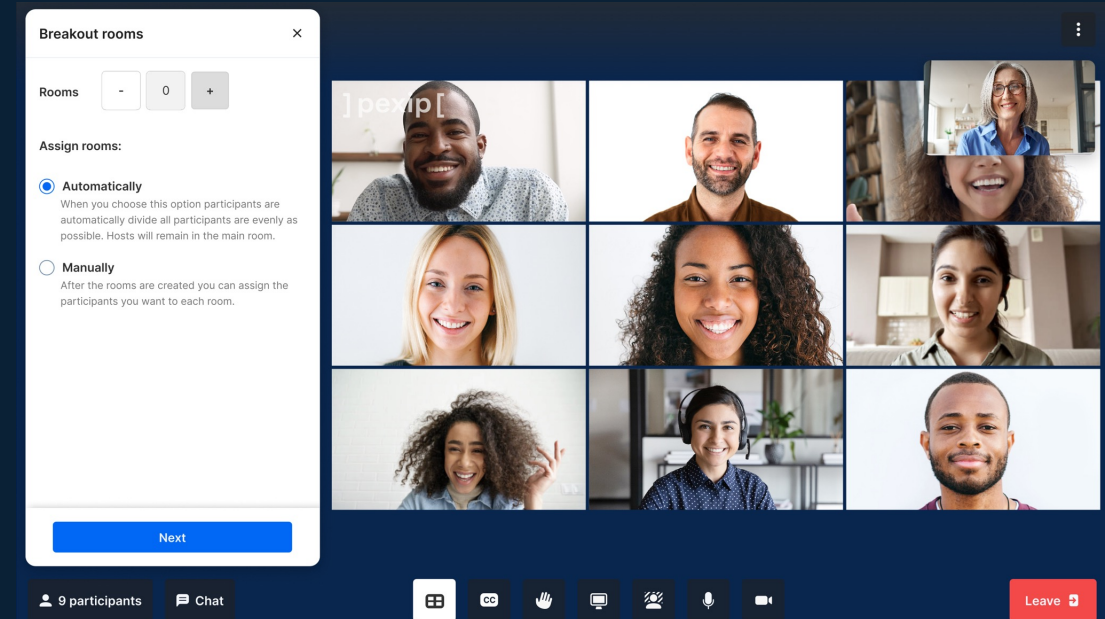

# Tailored Consumption

## *Breakout rooms API*

Infinity breakout room client API that allow anyone to build additional logic and integrations

## *Native webapp3 feature*

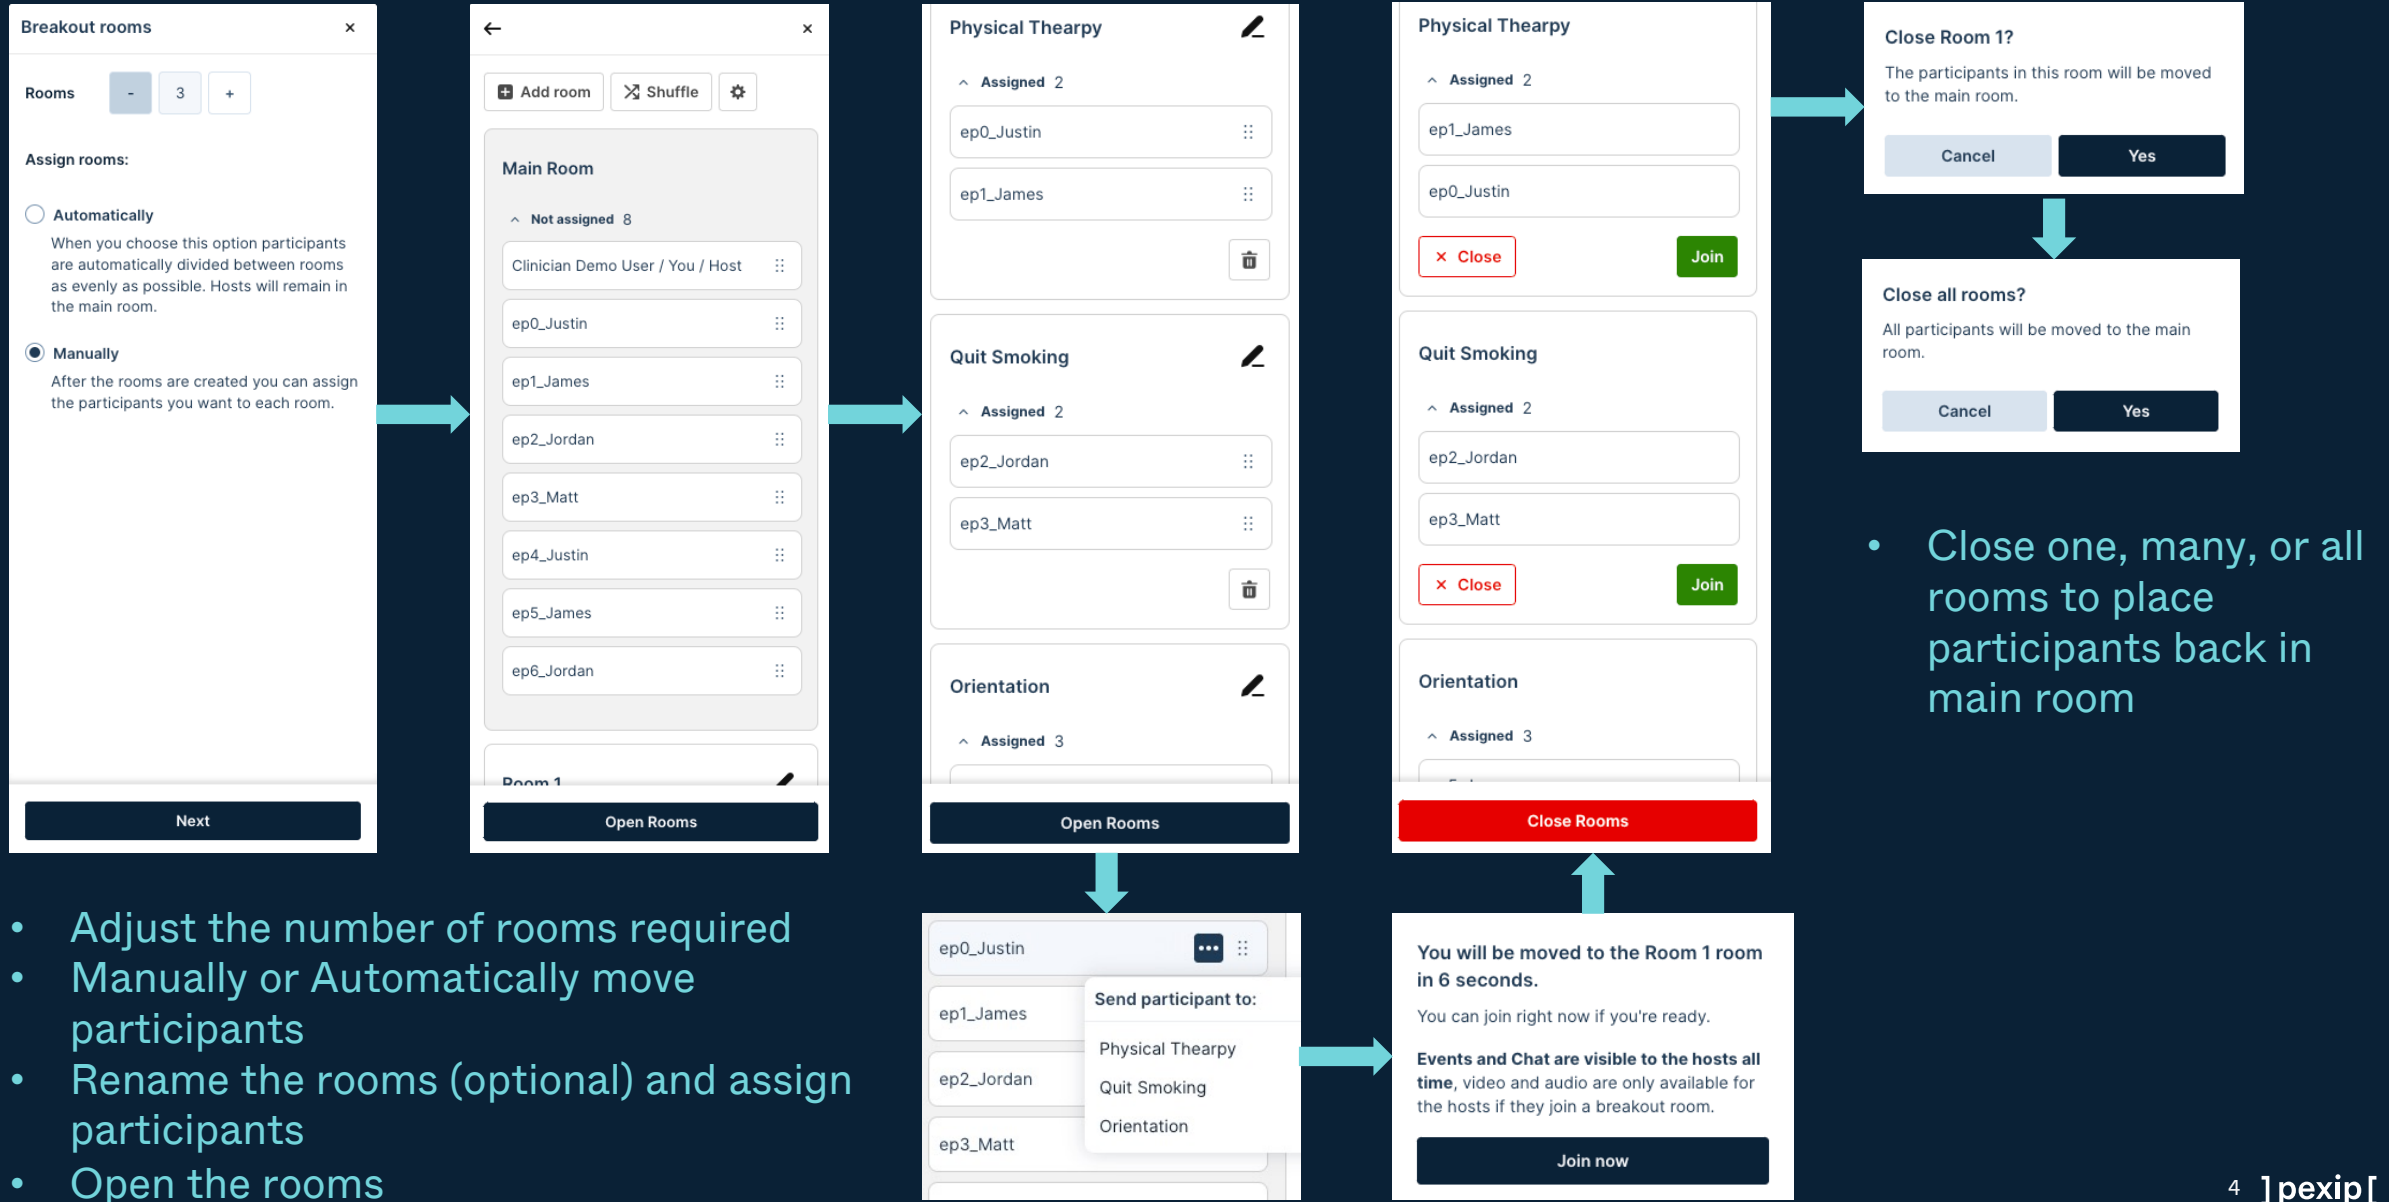

Native webapp3 integration using the new breakout room API

# Native Example

- Activate via the plugin (toolbar)
- Set up the breakout rooms while still keeping on eye on the call
- Automatically or Manual assign users
- See a preview before opening the rooms
- Set a timer
- Much more..

The screenshot displays the Zoom 'Breakout rooms' settings panel on the left and a grid of video feeds on the right. The settings panel includes a 'Rooms' section with a minus, '1', and plus button. Under 'Assign rooms:', the 'Automatically' option is selected, with a description: 'When you choose this option participants are automatically divided between rooms as evenly as possible. Hosts will remain in the main room.' The 'Manually' option is also visible with its description: 'After the rooms are created you can assign the participants you want to each room.' A 'Next' button is at the bottom of the panel. The video grid shows several participants in different breakout rooms. At the bottom of the Zoom interface, there is a toolbar with icons for chat, participants, breakout rooms, and a 'Leave' button.
